The Quality Report

Quarter 1, 2007

Prepared by Strategic Healthcare Programs, LLC. An independent national database service for healthcare*

This document reports aggregated data on several key outcomes indicators for cost effective, quality health care services. By participating in this third-party analysis of its data, this agency shows a commitment to quality care that surpasses others in the industry.

This agency decreased healthcare expenditures by managing patient care processes in the homecare setting.

91.44% of all patient episodes of care avoided re-admission to hospital.

92.33% of all patient episodes of care avoided emergent care use.

99.86% of patient episodes of care avoided an unexpected admission to a skilled nursing facility.

Experience

This agency provided homecare services to patients since January 1995

451 patients with orthopedic conditions.

302 patients with neurological conditions.

542 patients with diabetes.

149 patients with CHF.

618 patients with pressure or stasis ulcers and surgical wounds.

1,090 patients received extensive home therapy (PT, OT or Speech)

177 patients received home infusion or enteral therapy.
